## BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

## IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

## **Amendments to the Claims:**

- 1. (Cancelled)
- 2. (Cancelled)
- 3. (Cancelled)
- 4. (Cancelled)
- 5. (Previously Amended) A valve for a brake control actuator comprising:

a rod operable between respective operating conditions to selectively allow passage of brake

fluid through the valve; and

a ball non-rotatingly affixed at one end of the rod, the ball including a sealing section

comprising a first spherical segment that upon engagement against a ball-receiving seat in the

valve blocks passage to brake fluid therethrough, the ball further including a mounting

section integral with the sealing section, the mounting section comprising a second spherical

segment configured to provide a reduced footprint relative to a full spheroidal footprint and

enable a strong mechanical joint between the mounting section and the rod, wherein the

mounting section further comprises a cylindrical section circumferentially defining a

midsection of the ball and configured to join said first and second spherical segments, said

first spherical segment comprising a larger volume relative to the second spherical segment,

and wherein the cylindrical section is bounded at opposite axial ends thereof by

corresponding angled surfaces.

7. (Cancelled)

Appl. No. 09/974,739 Amdt. Dated May 4, 2004 Reply to Office Action of April 27, 2004

- 8. (Cancelled)
- 9. (Cancelled)
- 10. (Cancelled)
- 11. (Cancelled)
- 12. (Previously Amended) A method for arranging a valve for a brake control actuator, the valve including a rod operable between respective operating conditions to selectively allow passage of brake fluid through the valve, the method comprising;

configuring a ball non-rotatingly affixable at one end of the rod, the ball being configured to include a sealing section comprising a first spherical segment, and a mounting section integral with the sealing section;

configuring the sealing section so that upon engagement against a ball-receiving seat, the sealing section blocks passage to the brake fluid therethrough;

configuring the mounting section as a second spherical segment to provide a reduced footprint relative to a full spheroidal footprint while enabling a strong mechanical joint between the mounting section and the rod, and wherein the mounting section is further configured as a cylindrical section circumferentially defining a midsection of the ball to join said first and second spherical segments, said first spherical segment comprising a larger volume relative to the second spherical segment, and the cylindrical section is bounded at opposite axial ends thereof by corresponding angled surfaces;

configuring the end of the rod to correspond with the mounting section of the ball;

affixing the ball to the end of the rod.
